Eliminating Negative Reputation Impact

~ Reconstruction from Nuclear Disaster & the History of Safety and Revitalization of Fukushima ~

March, 2019
Status of the Areas under Evacuation Order in Fukushima

- Dimension of areas under evacuation order is about 2.7% of the whole prefecture. People in 97.3% of the prefecture can live a normal life.

- Dimension of Fukushima Prefecture: 18,783km² (2nd largest in Japan)
- Dimension of under Evacuation Order: 370km²

About 2.7% of the whole prefecture

Approx. 133km
Approx. 166km

TEPCO Fukushima Daiichi Nuclear Power Station

Source: Fukushima Prefecture and the Support Team for Residents Affected by Nuclear Incidents
The average air dose rate at 1m in height from the ground surface at a distance within 80km from TEPCO Fukushima Daiichi Nuclear Power Station decreased by about 77%* compared to levels in November 2011.

Legend:
Air dose rates at 1m in height from the ground surface (at 3km):

- 180 < 95 - 180
- 38 - 95
- 19 - 38
- 10 - 19
- 5 - 10
- 0.2 - 0.5
- 0.1 - 0.2
- ≤ 0.1

*The target area is divided into 250-m grid meshes and the value is calculated from the ratio of the measurement results in the central point of each grid mesh. The rate of reduction may differ when other comparative methods are used.

Current State of Air Dose Rates within Fukushima

- The air dose rate of major cities in Fukushima Prefecture is about the same level as other major cities overseas.

![Map showing air dose rates in different cities](image)

- Berlin: 0.07
- New York: 0.05
- Seoul: 0.12
- Paris: 0.04
- Singapore: 0.10
- Tokyo: 0.04

Typical regions with high natural radiation levels:
- Kerala (India): 1.05

Unit: Micro sievert/hour

Safety of Food in Fukushima Prefecture

- Announcement of results of thorough monitoring of agriculture, forestry, and fishery products prior to shipment.
- Very few foods have exceeded the standard limit (100 Bq/kg).
- No rice has exceeded the standard limit since the 2015 harvest.
- Necessary measures are in place to ensure that foods are not distributed in the market if found to have exceeded the standard limit.

**Testing of all rice produced (August 21, 2016 to October 31, 2016)**

* UNESCO recognized the efforts of Japan in monitoring food products to ensure food safety.

Based on information available to date, the Joint FAO/IAEA Division understands that the measures to monitor and respond to issues regarding the radionuclide contamination of food are appropriate, and that the food supply chain is controlled effectively by the relevant authorities.

Based on Fukushima Prefecture, "Steps for Revitalization in Fukushima (2015)"
 Standards for Radioactive Contamination of Food

Japan has the world's strictest level of standards for managing radioactive contamination of food. Foods exceeding the standards are not allowed to be distributed.

2. The SI levels shown are the upper limits allowed for food to be distributed or the supply of food is to be set for monitoring purposes and are not standards for determining whether food is safe or not for consumption. As different countries assume different proportions of their food supply is contaminated with radiation during computation, these numbers by themselves are not comparable.

2. While the Codex Alimentarius Commission (CAC) EU, and Japan all adopt similar procedures for radiation dosage from food, Japan used the assumption that a higher ratio of foodstuff could be contaminated with radiation, resulting in the lower values for SI.

3. The CAC was jointly set up by the Food and Agricultural Organization of the United Nations (FAO) and the World Health Organization (WHO) in 1963. The CAC oversees the Codex Alimentarius, a set of international standards for food, to protect consumer health and to promote fair international trade. As of August 2018, members of the Codex Alimentarius include 188 nations and the EU.
Reducing the Impact on Surrounding Environment

Improvements in Radioactivity in the Surrounding Sea Area

Level of Radioactivity in Surrounding Sea Area (Cs137)

- At time of accident: approx. 10,000 Bq/L
- WHO guideline for drinking water: 100 Bq/L

Improvements in Working Conditions

- More areas can be accessed in general work clothes
- With decontamination etc., workers can work wearing general work clothes instead of protective gear at 96%
- The site currently receives many visitors and the need for protective gear has been greatly reduced.

Provision of Warm Food Onsite

- Since Aug 2015, workers are able to enjoy warm food at the large scale resting area onsite.

Radiation Dosage Onsite

- Monitoring posts set up at the boundaries of the site record radiation levels constantly.
- The additional effective dose from the whole facility on the site is maintained to be less than the regulatory limit, 1mSv/year. (measured at the site boundary)
