DIDIER JULIENNE

STRATÈGE EN RESSOURCES NATURELLES

« The ecological transition switches our dependence on hydrocarbons towards metals dependencies »

Storage batteries, batteries for electric vehicles, but also wind and solar panels... Demand for metals, particularly cobalt, lithium and copper, is growing strongly and is becoming more and more urgent. In this regard, the global energy transition brings with it new supply problems and the need for new strategies. Especially since the objectives of reducing greenhouse gases, whether common or national, tend to establish these new challenges in a sustainable way. Didier Julienne Expert in natural resources gives Enerpresse an insight into these new challenges.
