**United States Presidential Election 2020.
Analysis as part of the possibility of
the impeachment process against Donald Trump.**

"Endangering the lives of others and Lying by « voluntary » omission.

1- D. Trump tested positive for Covid-19 since September 16, 2020?

A source close to the White House says: "Donald Trump was tested Covid-19 positive on Wednesday, September 16, 2020. This test was confirmed at the PCR on Saturday 19 September 2020. »

As of that moment, Donald Trump no longer required Joe Biden to submit to a doping test. Probably, Trump was afraid of being required to submit to a Covid-19 test, as some members of Donald Trump's campaign team claimed that Trump was already showing symptoms of Covid-19 the week before the first TV debate.

On the evening of 29 September 2020, the first television debate took place between Donald Trump who was a Covid-19 positive and Joe Biden. Wearing the mask was not required by the debate organisers. So Donald Trump "voluntarily" exposed Joe Biden to the risk of Covid-19 contamination.

2- Why could D. Trump no longer hide his illness from Covid-19?

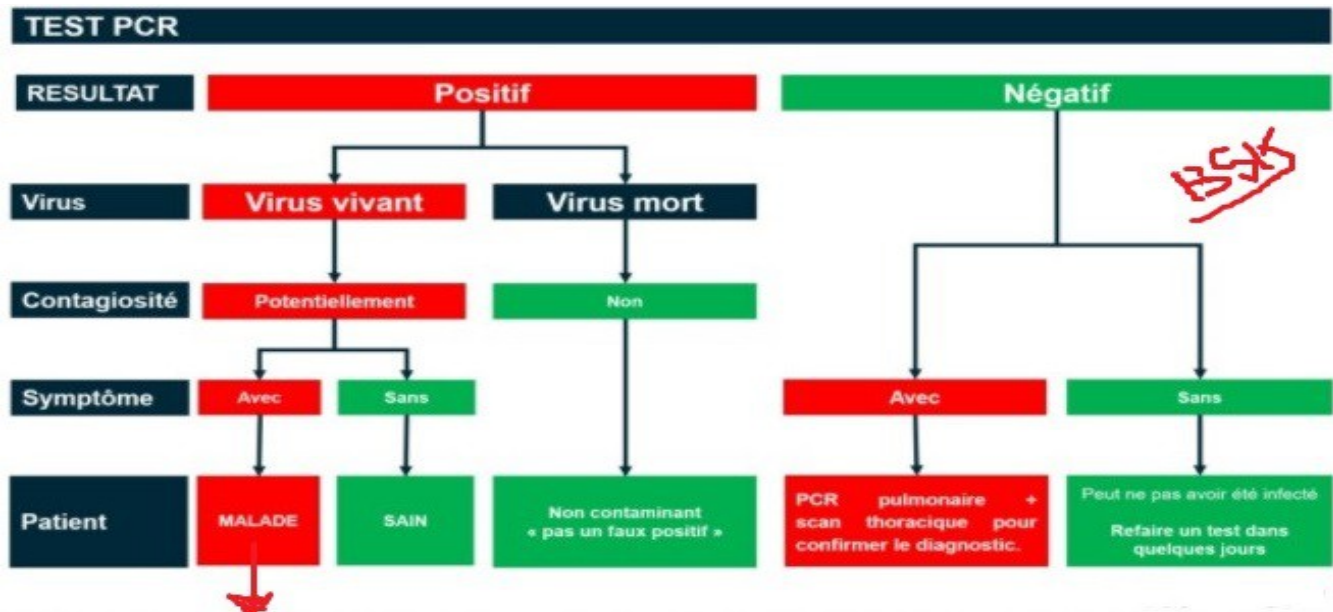

On Thursday 01 October 2020, Dr. Sean Conley, Donald Trump's personal physician, convinced his patient to publish a press release announcing that he was tested Covid-19 positive, without specifying the exact date of the test performed on Donald Trump.

Our source states that :

"Donald Trump has developed a severe form of Covid-19 characterised by lung damage. The management of this aggravation of the disease required an emergency transfer to hospital ...

If Donald Trump's illness had not worsened, he would have continued to hide the fact that he was Covid-19 Positive".

It would be absurd to affirm that Donald Trump would have contracted the disease at Covid-19 on the same Thursday 1st October 2020, knowing that the incubation period (the interval between the contamination and the appearance of symptoms) of the virus at Covid-19 is 5 days on average. And this can be up to 15 days or more. In any case, D. Trump was infected with Covid-19 long before the TV debate with Joe Biden. This is almost an irrefutable scientific certainty.

Donald Trump

On the same Thursday, 2020, Dr. Sean Conley stated that D. Trump received supplemental oxygen. Dr. Sean Conley reserved the right to explain to US citizens that Donald Trump was already Covid-19 Positive tested long before Donald Trump's press release announcing that he was Covid-10 Positive tested. Thus, Dr. Sean Conley became Donald Trump's accomplice to the detriment of the health of the millions of American citizens at risk of being contaminated.

Betting Against the Consensus

Thus, it should be presumed that Donald Trump, who has systematically refused to wear the mask, "voluntarily" contaminated his entire direct and indirect entourage.

The number of infected people around Donald Trump is alarming!
<https://twitter.com/DeLandslide2020/status/1315120152241827842>

On Friday 02 October 2020, Donald Trump was transferred to Walter Reed Military Hospital in Bethesda near Washington to follow a very heavy experimental treatment exclusively reserved for patients suffering from severe forms of Covid-19, composed in particular of the antiviral Remdesivir, synthetic antibodies, Dexamethasone (corticoid), as well as zinc, Vitamin D, Fomotideine, Melatonin and Aspirin.

It is obvious that this cocktail of drugs is sufficient proof that Donald Trump did not suffer from a benign form of Covid-19 disease !

3- Dr Sean Conley unable to give the exact date of his patient's last Covid-19 negative test?

On October 05, 2020, Donald Trump left the hospital to continue his treatment at the White House during the quarantine period.

When a reporter asked for the exact date of the last Covid-19 test that was "Negative", Dr. Sean Conley, Donald Trump's personal physician, replied, "I don't want to go back. » . Since that day, Dr. Sean Conley has always declined to reply to this uncomfortable question. Dr. Sean Conley is protecting his patient Donald Trump, who has probably deliberately infected several people around him.

Dr. S. Conley's press briefing of 05 October 2020

4- Dr Sean Conley has put an end to Donald Trump's isolation in a hurry?

On Saturday 10th October 2020, Dr Sean Conley published a press release announcing that his patient Donald Trump no longer has a fever, and the other symptoms of Covid-19 have improved. Dr Sean Conley was very careful not to state clearly that Donald Trump was still Covid-19 positive. He concluded that his patient suffered from a moderate Covid-19, as the symptoms have been present for less than 10 days since

CONGO CAPITAL

Betting Against the Consensus

their onset on 01 October 2020, in accordance with CDC criteria which determine whether the patient can be released from quarantine without risk of infecting others.

The White House statement of October 10, 2020 :

<https://twitter.com/JDiamond1/status/1315093470940282880?s=20>

Dr. Sean Conley's aforementioned assertions are not credible. This is in light of the above statements by Donald Trump's campaign staff that D. Trump had been showing symptoms of Covid-19 long before the television debate.

Obviously, the symptoms of breathing distress (the drop in oxygen saturation in the blood. In this case, Donald Trump's oxygen saturation dropped to 93%, according to Dr. S. Conley. The reality can be much lower and usually appears after the symptoms.

It should therefore be stated that as of October 10, 2020, Donald Trump has had more than 20 days with symptoms that are still present, except for fever. Thus, we are talking about a severe case of Covid-19 disease, according to CDC criteria. This, while the PCR test is still positive.

As a result, Dr. Sean Conley has ended Donald Trump's isolation period in a very hurried manner, while he is still potentially contagious, endangering the health of those who are in contact with Donald Trump. Dr. Sean Conley's decisions were guided by the political interests of his patient.

Discontinuation of Transmission-Based Precautions and Disposition of Patients with COVID-19 in Healthcare Settings (Interim Guidance)

Updated Aug. 10, 2020

Print

CDC guidance for SARS-CoV-2 infection may be adapted by state and local health departments to respond to rapidly changing local circumstances.

Summary of Changes to the Guidance

Summary of Recent Changes as of August 10, 2020 to more closely align guidance with [Decision Memo](#):

- For patients with [severe to critical illness](#) or who are severely immunocompromised¹, the recommended duration for Transmission-Based Precautions was changed to at least 10 days and up to 20 days after symptom onset.
- Recommendation to consider consultation with infection control experts.
- Added example applying disease severity in determining duration of isolation using Transmission-Based Precautions.
- Added hematopoietic stem cell or solid organ transplant to severely immunocompromised conditions.

5- Donald Trump definitively stated Covid-19 Negative on the basis of an unreliable test?

On 12 October 2020, when Donald Trump had already restarted his election campaign, from 10 October 2020, Dr. Sean Conley published another press release announcing that the About BimaxNow tests carried out on D. Trump, "for several consecutive days", show that he has become Covid-19 negative.

In any case, Dr. Sean Conley should have ended his patient's isolation period from October 12, 2020 at the earliest. Further, the above-mentioned About BimaxNOW test as well as the PCR and other tests should have been Covid Negative.

The White House press release of October 12, 2020 :

<https://twitter.com/PressSec/status/1315764217249771526?s=20>

6- Conclusion :

From the aforementioned, it must be affirmed that US public health standards have been flouted to the benefit of Donald Trump's political interests, thus putting the lives of US citizens at risk. A judicial investigation based on the investigation of Donald Trump's entourage would help to clarify the many grey areas in the statements made by Donald Trump and Dr Sean Conley.

The committee set up by the House of Representatives could appoint a group of medical experts, including a virologist, an infectious disease specialist (...) an epidemiologist and a psychiatrist, to examine all Donald Trump's files from 7 September 2020 until the date of publication of the final report of the aforementioned experts. This will allow to determine whether Donald Trump and Dr. Sean Conley lied by "wilful" omission. And finally decide whether Donald Trump is qualified to lead the USA.

On this basis, Donald Trump and Dr. Sean Conley could be subject to criminal charges including engagement of the lives of others, and lying by « voluntary » omission. So, the House can an official impeachment inquiry against Donald Trump.
