

# Développer:

The diagram illustrates the distributive property of multiplication over addition and subtraction. It shows the following equation:

$$A \times (B \pm C) = A \times B \pm A \times C$$

Where:

- $A$  is represented by a yellow square.
- $B$  is represented by a blue square.
- $C$  is represented by a green square.
- The operation  $\pm$  (plus or minus) is shown between the blue and green squares in both terms.
- Arrows indicate that the yellow square  $A$  is multiplied by both the blue square  $B$  and the green square  $C$ .
